

CCG IMPROVEMENT & ASSESSMENT FRAMEWORK

Status across domain areas

NHS Bradford City CCG

We spend approximately **£1,331** for every person registered with a GP in the city and this money gives both local doctors and local people more say in how our healthcare is organised. We are recognised as being the most deprived CCG in England as we have some of the poorest communities living in our city and we want to tackle inequalities that contribute to ill health

*** Better *** Similar *** Worse compared to England

Self-care

Better self-care: training

10.3% of staff across health and social care have attended training to support people with better self-care

Out of Hospitals

Carers with a Long-Term-Condition

0.61 score for carers reporting they feel supported to manage their LTC(s) ranks low amongst England's CCGs and we need to improve

Urgent & Emergency Care

Urgent Care Sensitive conditions

We have the highest rate of emergency admissions for urgent care sensitive conditions in England with 4,224 per 100,000 population

Planned Care

Gastroenterology

Gastroenterology specialty considering a 24/7 acute model across 2 sites at Airedale Hospital and Bradford Royal Infirmary

Better Health

change 4 life Childhood obesity

2 out of 5 children aged ten or eleven year olds are overweight or obese, this result is higher than the England which is 3 out of 10

Health inequalities

The frequency of people being admitted to hospital for long term conditions, from our poorest communities is 3 ½ times higher than the England average.

Better Care

Care Quality Commission Care quality ratings

Ratings for primary care, hospitals and community services are satisfactory. However, ratings for care homes and residential homes show us there is a great need for improvement in our area

THE NHS CONSTITUTION NHS Constitution Standards

Waiting times for cancer treatment, for hospital out patient appointments and in Accident and Emergency are not meeting the recommended standard

Sustainability

Financial performance **Green**

We want to make every pound go further and have developed plans to improve quality whilst saving money. At this time we are not fully delivering planned savings.

Uptake of new e-referrals system

Currently only 1 in every 3 referrals are made electronically via the e-referrals services. This needs to be the way all patients are referred by the 1st of October 2018

Leadership

Quality of Leadership **Green Star**

In 2016/17 the quality of our leadership was assessed as joint top in England, this top place is shared with 30 other CCGs.

Effectiveness of relationships **Green**

360 degree stakeholder survey, closed recently - data not yet available

NHS Bradford City CCG

*** Better ** Similar * Worse compared to England

Diabetes
Structured education
3 x treatment levels

Cancer
Early diagnosis & treatment
improved outcomes

Mental Health
Access to treatment & out of area

Learning Disabilities
Health checks & in-pts

Maternity
Experience and outcomes of maternity services

Dementia
Prevalence and post diagnostic packages

Breathing Better
Asthma and COPD

Bradford Beating Diabetes

Structured education

3 recommended Treatment levels

Attendance for people with a new diagnosis of diabetes is low across England at just 7.3%. Our local result is even lower with just 2 out of every 100 attending

Good control of BP, cholesterol and HbA1c (sugar) is important. However, only 7 out of 20 people with diabetes have good control of all three. We need to make improvements

Bradford Improving Cancer Survival

Cancer diagnosis at an early stage

Cancer survival at one year

Diagnosing cancer at an early stage is important however only 1/2 of all cancer cases are diagnosed early, this result is about the same as across England however needs to improve

7 out of every 10 people with cancer survive beyond the first year. This result is much lower than seen across England and we need to improve

Mental Health

Early Intervention Psychosis

Out of area placements

Access to intervention for psychosis is above the 50% standard, with almost 2 out of every 3 people being seen within 2 weeks for a NICE recommended care package

Reducing out of area placements for people with mental health problems is a key priority – currently we have 115 bed days placed out of area

Learning Disabilities

Reduce specialist inpatient care

Health checks

For all three CCGs across Bradford district and Craven the rate of specialist inpatients is 54 per 1 million population. We need to reduce this by at least half

2 out of every 3 people aged 14 or over, with a learning disability receive their annual health check, this result is amongst the highest across England

Maternity

Smoking in pregnancy

Just over 1 in 10 women still report as smokers at the time of delivering their baby. This result is similar to the England rate, however needs to reduce

Neonatal mortality and stillbirths

The rate of neonatal mortality and stillbirths is 6.2 per 1,000 births however there is a national ambition to reduce this to below 0.67 per 1,000

Dementia

Dementia diagnosis

4 out of 5 people estimated to have dementia in our population have been found, this result is amongst the best in England

Care planning

4 out of every 5 people with a diagnosis have care planning and post-diagnostic support in place, again this is amongst the best in England
